Word Randomization

For this project, we were to choose 3 different articles. For me, I wanted to go for something a bit silly or strange. That's why, I went ahead and chose articles from the onion.

These were the articles I chose:

- [Frustrated God Rejected From Mensa Again](#)
- [Mark Zuckerberg Vows Employees Responsible For Facebook Outage Will Be Bullied To Suicide](#)
- [What The Fuck Is Going On? Epic Games Has Apparently Added Stretch Limousines, Panini Presses, And Komodo Dragons Since The Last Time You Played 'Fortnite,' Which Was Only, Like, 2 Weeks Ago](#)

we

responsible

systems

of

apps

go

through

CEO

outage

Image Research

We were tasked with making 5 to 8 different pieces. However, before I could create these pictures, I needed to do a bit of picture searching in order to make them.

Image 1 Draft

For this image, I wanted to go with a creepy feel; As if the image was looking directly at you. It was during this process that I figured out I could make the background larger and force the head and words to follow.

Image 2 Draft

I wanted to take in the CEO portion of my statement and play with it. I also wanted to play with a glitchy effect. This one was relatively basic, layering and resizing using HTML.

Image 3 Draft

Now this image, I decided to go all out.

The background was done in entirely HTML where the foreground and glitch effect were placed. I wanted to keep that glitchy feeling as if the mind of the robot was breaking forth.

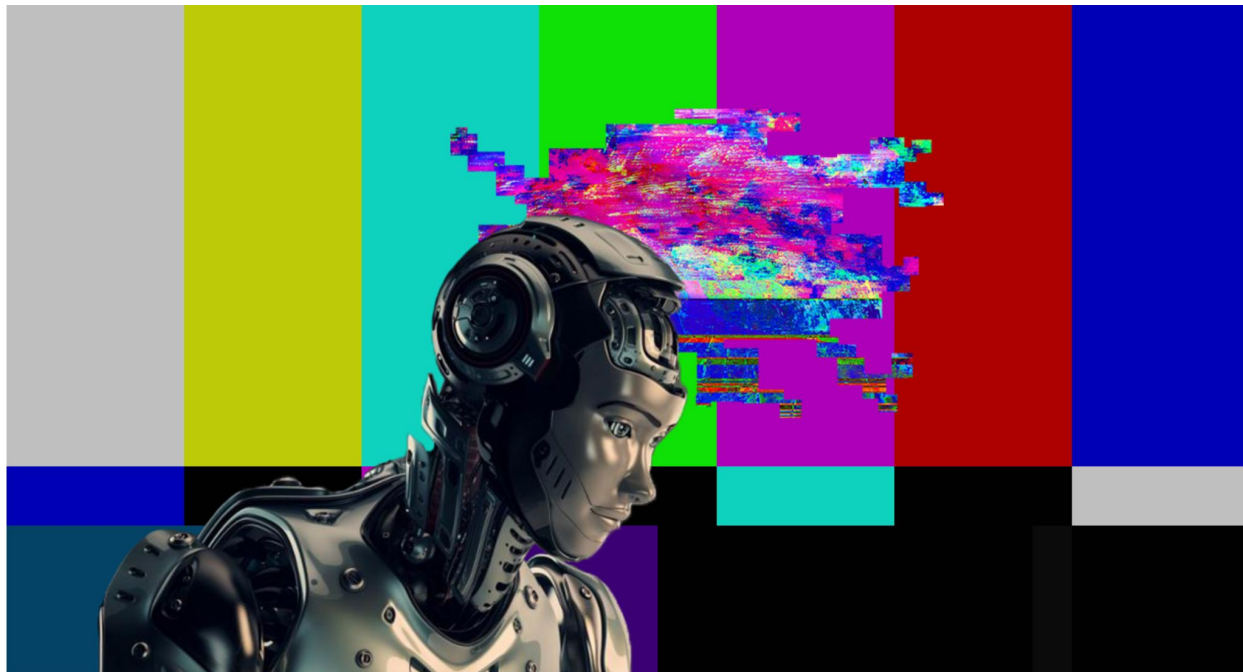

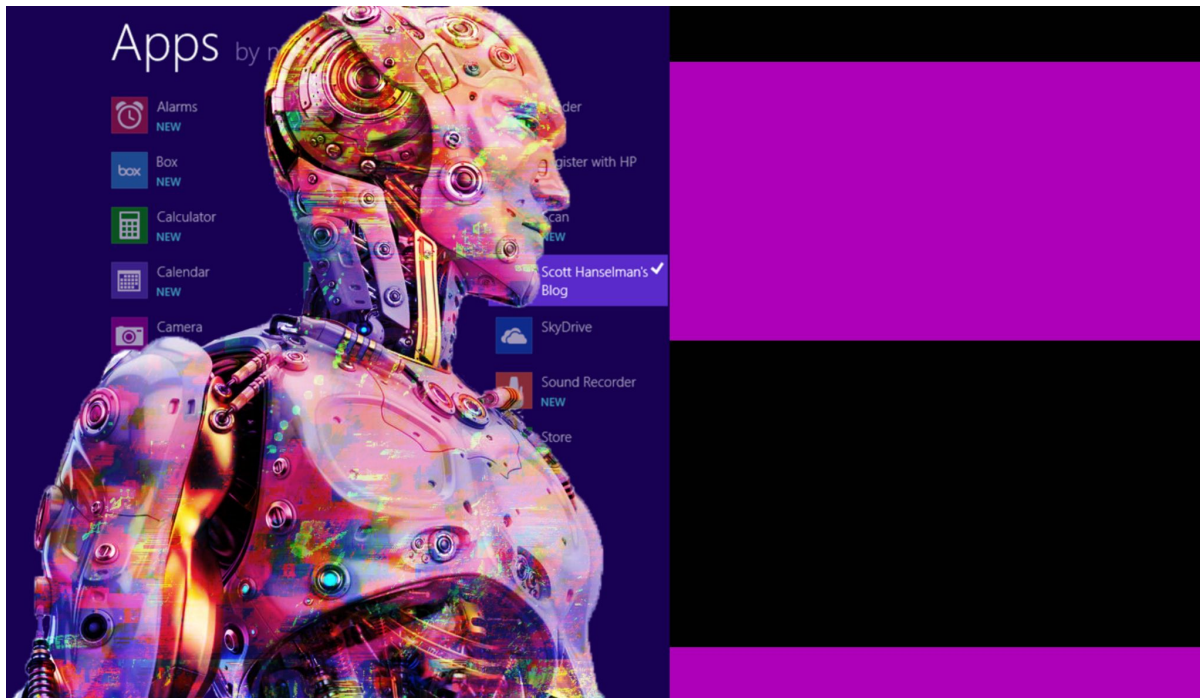

Image 4 Draft

This one was quite fun to play around with. I wanted to incorporate more words into my work. To tie in the first image's idea with the rest of it.

Image 5 Draft

Lastly, I wanted to incorporate actual images along with html cubes. I knew I wanted to use cubes and harsh colours because I wanted to achieve that real software gore effect.

Artist's Statement

For this project, we were tasked with combining our talents of HTML, CSS, and Photoshop knowledge. This project for me was honestly quite the undertaking. I found myself struggling throughout it but despite all, I found that this was truly what I needed to expand my knowledge in HTML. Manuvering each image and combining CSS in order to achieve my desired effect was difficult but no doubt rewarding.
